CLOSURE CORRUGATED POLY

A corrugated poly closure is a profile-matched, closed-cell polyethylene foam closure designed to seal the gaps beneath corrugated roof sheeting at the ridges and eaves. It provides a secure, weather-resistant seal that helps prevent the ingress of water, dust, insects and birds while improving the overall performance of the roofing system.

Key Features:

- Manufactured from durable closed-cell polyethylene foam.
- Profiled to suit standard corrugated roof sheeting.
- Provides a weather-tight seal at roof ridges and eaves.
- Helps prevent the ingress of water, dust, insects, birds and debris.
- Flexible and resilient for a snug fit to the roof profile.
- UV resistant and suitable for long-term outdoor use.
- Easy to install for new roof installations and maintenance projects.

Applications:

- Corrugated roof sheeting systems.
- Roof ridge sealing.
- Roof eave sealing.
- Commercial, industrial and residential roofing applications.
- New roof installations, repairs and refurbishment projects.
